## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of claims 1-3, 7-9, 13-16 and 18-19 in the reply filed on 22 January 2008 is acknowledged.

It is noted by the examiner that elected claims 2, 8, 13-16 and 18-19 claim subject matter which is/are based upon a non-elected Species II (Fig 5) as disclosed in the specification.

### ***Drawings***

2. Figures 7-13 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

3. Page 18, line 12 recites "file" although the remaining paragraph refers to "film" material.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re*

Art Unit: 2622

*Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 3, 7 and 9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over patented claim 13 of U.S. Patent No. 7,327,397. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 3, 7 and 9 appear to be broader than that of patented claim 13.

Patented claim 13,

Recites the claimed motion vector detection...(patented claim 12, limitation c), the claimed image shifting (patented claim 13, limitation a ), the claimed averaging (patented claimed 13, limitation b, c)

Although the pending claim recites shifting by  $\frac{1}{2}$  or  $-\frac{1}{2}$  (limitation b) the shifting of pixels by less than a pixel (i.e.  $\frac{1}{2}$  or  $\frac{1}{4}$  etc...) are considered conventional modifications known in the art, based upon precision of the system and data being processed. That is there are no unexpected results by shifting a pixel by a fractional amount as practiced conventionally in the art.

Regarding pending dependent claims 7 and 9,

Although patented claim 13 does not recite "block matching" in detecting the motion vector, the use of such technique is notoriously well known in the art, and thus would have been obvious to utilize such technique for the intended purpose of obtaining/detecting the motion vectors.

The tools currently available in the Patent EBC are Patent Application Information Retrieval (PAIR) and the Electronic Filing System (EFS). PAIR (<http://pair.uspto.gov>) provides customers direct secure access to their own patent application status information, as well as to general patent information publicly available. EFS allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
